

We are pleased to announce our fifth global webcast on risk management:

**Preparing for the Unexpected: Enhancing the Actuarial Toolkit.**

The program is comprised of three webcasts that run across the Asia-Pacific (AP), North American (NA) and European (EU) regions as follows:

Dec. 7, 2011 – Noon - 4:15 p.m. EDT (NA region)

Dec. 8, 2011 – 1:00 - 5:45 p.m. JST (AP region)

Dec. 9, 2011 – 11:00 a.m. - 3:35 p.m. WET (EU region)

The sessions provide a variety of content and commentary on topics relevant to actuaries and risk professionals. The global spread aims to shed light on developments and challenges faced by our counterparts in other parts of the world, covering both technical and professional aspects. The webcasts were developed for those working in all industries with an interest in enterprise risk management. They will feature an update on the much talked about risk credential for actuaries, Chartered Enterprise Risk Analyst (CERA), and perspectives from modelers and reinsurers of mega events. Longevity is covered from different angles and Solvency II remains a key agenda item for the insurance industry.

Following the example set by the webcast run earlier in the year, the regional programs will feature presentations from speakers in the other two regions.

The varied agenda has been created to inform and engage you. Be sure to join us for a lively discussion.

Regards,

Marjorie Ngwenya  
Editor, *The Actuary*
